

Member Emeritus R. Westphal does it again!

Dick has been an invaluable volunteer. A long time member who has held several board positions, he still feeds at the Sandia Vista site. He also assists with flushing and trapping several times during the week. Seeing an opportunity to improve on the PDP Foaminator and employing his manufacturing background Dick developed the Mark III model which allows for one hand operation. The unit was successfully field-tested at a number of sites and now is the flushing instrument of choice.
